

### **Procedure of the game "Keno Express" and the winnings options**

"Keno Express" is an ongoing game that players can join at any time. To participate in the game, the player must choose one of the suggested outcomes (options), enter the bet amount and make a bet. At least 8 seconds are given to make a bet.

In each round, one of the balls numbered 1-100 is randomly drawn from the lottery machine. The player must select any range from 1 to 100 numbers - either greater/smaller than a certain number, or an interval between two numbers, and wait until the number of the given round is drawn from the machine. If the number drawn belongs to the numerical range chosen by the player, he wins, otherwise he loses.

#### **In "Keno Express", it is possible to bet on the following outcomes of the next starting round:**

- 1) The number drawn from the lottery machine is Greater than (or equal to) the selected number. For example, the player chooses the number "10" and sets "Greater" for it. If 10 or a greater number is drawn from the lottery machine, he wins, and if a number smaller than 10 is drawn, he loses.
- 2) The number drawn from the lottery machine is Smaller than (or equal to) the selected number. For example, the player chooses the number "10" and sets "Smaller" for it. If 10 or a smaller number is drawn from the lottery machine, he wins, and if a number greater than 10 is drawn, he loses.
- 3) The number drawn from the lottery machine is in the range of two numbers chosen. For example, the player chooses the range "10-37" and defines that the number drawn will be from that range. If a number which belongs to this range is drawn from the lottery machine, i.e. is greater than (or equal to) 10 and is smaller than (or equal to) 37, then the player wins, and if a number smaller than 10 or greater than 37 is drawn, then he loses.
- 4) The number drawn from the lottery machine is not from the range of two numbers chosen. For example, the player chooses the range "10-37" and defines that the number drawn will not be from that range. If a number which does not belong to this range is drawn from the lottery machine, i.e. is smaller than (or equal to) 10 or greater than (or equal to) 37, then the player wins, and if a number greater than 10 and smaller than 37 is drawn, then he loses.

There are fixed odds defined for all the game outcomes, and they are marked on the corresponding buttons. The winning is counted by multiplying the player's bet amount by the odds of the correctly predicted outcome.

Not to enter the bet amount manually, there is a special section where the players can press and choose automatically the preferred amount for the bet. In each round, the players can make 2 bets simultaneously as well as double their bet. The players have an opportunity to see the numbers drawn from the lottery machine in the previous rounds.

In the game "Keno Express", the RTP (return to player) is 97%. This means that in case the player makes a bet "Greater" than (or equal to) certain number, he can choose "5" as the minimum number - "Greater" than (or equal to) 5, and for bets "Smaller" than (or equal to) a certain number, he can choose "96" as the maximum number - "Smaller" than (or equal to) 96. In case of a bet made on the drawn number to be from

the range of two numbers chosen, the maximum length of the range is 95 (the difference between the right and left endpoints of the longest possible segment), while in case of a bet made on the drawn number not to be from the range of two numbers chosen, the minimum length of the range is 5 (the difference between the right and left endpoints of the shortest possible segment).

The number drawn from the lottery machine is defined not during the game but beforehand, 10 games in advance. After the end of the game, the players are given an opportunity to make sure that the number drawn is created before the game and not during it. After the end of the game, a code is provided, entering which in a special program, the players can make sure that the number drawn has been defined beforehand and not during the game.

Disconnection policy: If a disconnection occurs after active game round and your bets were accepted by the server, the game will proceed as normal and any winnings will be processed according to the game result regardless of the disconnection.

### **Bonus requirementsa**

Freebets are fixed amounts, for example, a player received 10 x 100USD, this means the player receives 10 freebets and each of them has a value of 100. In case of the freeamount, the player receives a free bonus amount, say 1000 USD. Players should activate bonuses in order to use them. If the player wants to wager with real money he/she should deactivate active bonus and only then play with real money. If the bonus balance is lower than the bet amount (in case of FreeAmount bonus type) then an error occurs saying insufficient bonus balance.
